AB - Granulated sodium sulphate base is adsorbed to green tea extract.
- USE/ADVANTAGE :
The green tea agent is used for bathing. The bathing agent is easily
handled and easily dissolved in warm water.

PURPOSE:To obtain a bath medicine containing granulate of sodium sulfate base material to which green tea extract is adsorbed, capable of readily handling, storing and carrying, simply dissolving in hot water in a bath without causing insoluble substances. **CONSTITUTION:**The objective bath medicine containing granulate of sodium sulfate base material to which green tea extract is adsorbed as an ingredient. A liquid mixture consisting essentially of green tea extract is added to a powder mixture containing anhydrous sodium sulfate and binder and the blend is granulated and water in the solvent is changed into crystal water of sodium sulfate to provide a dried granular state to the base material without requiring any drying process.; At separator capable of preventing the grains from bonding each other and from producing mass-like large grains during the granulating process is previously added to said liquid mixture.
